EDUCATION

Purdue University

Dec 2028 (Expected)

B.S. in Computer Science & Mathematics

West Lafayette, Indiana

- **Relevant Coursework:** Linear Algebra, Multivariable Calculus, Differential Equations, Discrete Math, Statistics, C Programming, Java Programming
- **Activities:** Hack the Future, Purdue Undergraduate Rocket Propulsion Lab

EXPERIENCE

NuStudio.AI

May 2026 – Sep 2026

AI/ML Intern

Chicago, IL

- Engineered an LLM-powered agent for automated cross-language code migration, reaching 95% translation accuracy on test conversions.
- Refined agent behavior and validated outputs across Cortava AI's credit union product suite, improving tool reliability and surfacing failure modes in core workflows.
- Designed REST endpoints for Sarvos's Action Broker with typed action-proposal contracts and validate/execute flows across billing, document, and matter-intake domains, enabling deterministic, auditable agent actions.

Bioqore

June 2026 – Aug 2026

Software Engineering Intern

Boston, MA

- Developed a synthetic biomanufacturing data framework in Python using SDV's Gaussian Copula and CTGAN models, achieving 85% fidelity against real upstream process data.
- Benchmarked generative models on statistical fidelity, domain validity, utility, and privacy to select the optimal model for USP process data.
- Built a biological validity rule engine and model bake-off harness enforcing plausibility constraints (titer/IVCD consistency, metabolite bounds) as hard gates, flagging 93% of implausible records across 8 rules.

AlgoVerse

Aug 2024 – Apr 2025

CS/ML Engineer

Palo Alto, CA

- Built a multi-turn LLM framework with prompting strategies that reduced sycophancy-driven accuracy degradation by 43%.
- Designed static and rationale-based feedback pipelines to simulate human-like multi-turn interactions.
- Co-first authored a paper presented at **NAACL SRW**; 25+ citations, including work from Harvard and Google DeepMind.

Northwestern University – Bagci Lab

June 2024 – Feb 2025

Machine Learning Engineer

Chicago, IL

- Built a CNN that identifies the peak enhancement point of aortic CT scans for radiologists; predicted vs. actual peak time differed by a mode of 0.3 s, a 97% error reduction over prior results.
- Improved prediction accuracy by 50% on 272 CT scans, reducing radiodensity error from 200 to 100 HU.
- Second author on a paper submitted to **IEEE EMBC**; patent pending.

PROJECTS

Credit Card Fraud Detection | *Python, scikit-learn, pandas, XGBoost*

May 2026

- Built a real-time fraud detection pipeline combining classification and anomaly detection; 97.6% ROC AUC and 86% F1 on the fraud class (88% precision, 84% recall).
- Processed a highly imbalanced dataset of 284,807 transactions and compared Logistic Regression and XGBoost models to optimize predictive performance.

Vela (YC W26) | *TypeScript, Google Analytics 4*

Jan 2026 – Feb 2026

- Built and deployed GA4 event tracking infrastructure across Vela's website to measure user workflows, conversion funnels, and retention.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, SQL

Frontend: React, Next.js, Tailwind, HTML, CSS, Browser APIs

Backend & ML: Node.js, REST API design, PyTorch, scikit-learn, pandas, MongoDB, SDV
