

Srihan Vege

West Lafayette, Indiana

📞 (385) 251-7007 | ✉ vegesrihan@gmail.com | 🌐 github.com/srihanvege

EDUCATION

Purdue University

Dec 2028 (Expected)

B.S. in Computer Science & Mathematics

West Lafayette, Indiana

- **Relevant Coursework:** Linear Algebra, Multivariable Calculus, Differential Equations, Discrete Math, Statistics, C Programming, Java Programming
- **Activities:** Hack the Future, Rocket Propulsion Lab

EXPERIENCE

Microsoft

Aug 2026 – Present

Data Science Researcher – Minecraft

West Lafayette, IN

- Building ML pipelines for content classification and trend analysis on the Minecraft Marketplace as part of Purdue's Data Mine Corporate Partners Learning Community

NuStudio.AI

May 2026 – Sep 2026

AI/ML Intern

Chicago, IL

- Engineered an LLM-powered agent for automated cross-language code migration under the Apex team
 - Reached 95% translation accuracy on test conversions
- Tested edge cases and validated agent outputs across Cortava AI's credit union product suite, surfacing failure modes
- Designed REST endpoints for Sarvos's Action Broker (typed action-proposal contracts, validate/execute flows) across billing, document, and matter-intake domains
 - Enabled deterministic, auditable execution of agent-proposed actions

Bioqore

June 2026 – Aug 2026

Software Engineering Intern

Boston, MA

- Built a synthetic biomanufacturing data framework in Python with SDV's Gaussian Copula and CTGAN models
 - Achieved 85% fidelity against real upstream process data after benchmarking fidelity, validity, utility, and privacy
- Designed a biological validity rule engine and model bake-off harness enforcing plausibility constraints (titer/IVCD consistency, metabolite endpoint bounds) as hard gates
 - Flagged 93% of implausible synthetic records across 8 validation rules before model selection

AlgoVerse

Aug 2024 – Apr 2025

CS/ML Engineer

Palo Alto, CA

- Built a multi-turn LLM framework with prompting strategies that cut sycophancy-driven accuracy loss by 43%
- Designed static and rationale-based feedback pipelines to simulate human-like multi-turn interactions
- Co-first authored a paper at **NAACL SRW**; 25+ citations, including from Harvard and Google DeepMind

Northwestern University – Bagci Lab

June 2024 – Feb 2025

Machine Learning Engineer

Chicago, IL

- Built a CNN that enables radiologists to accurately determine the peak enhancement point of an aortic CT scan
 - Predicted vs. actual peak time differed by a mode of 0.3 s, a 97% reduction from previous test results
 - Improved prediction accuracy by 50% on 272 CT scans, reducing radiodensity error from 200 to 100 HU
- Second author on a paper submitted to **IEEE EMBC**; patent pending

PROJECTS

Credit Card Fraud Detection | *Python, scikit-learn, pandas, XGBoost*

May 2026

- Built a real-time fraud detection pipeline (Logistic Regression, XGBoost, anomaly detection) on an imbalanced dataset of 284,807 transactions
 - Achieved 97.6% ROC AUC and 86% F1 on the fraud class (88% precision, 84% recall)

Vela (YC W26) | *TypeScript, Google Analytics 4*

Jan 2026 – Feb 2026

- Deployed GA4 event tracking across Vela's website to measure user workflows, conversion funnels, and retention

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, SQL

Frontend: React, Next.js, Tailwind, HTML, CSS, Browser APIs

Backend & ML: Node.js, REST API design, PyTorch, scikit-learn, pandas, XGBoost, MongoDB, SDV
